## Eternity 8

Elegance is created when details are not left to coincidence. The Eternity 8, outlined with a real metal frame merges harmoniously into the TENSE design world, defining a consistent, premium aesthetic appearance throughout the entire building. Hidden behind its minimalist design it becomes a central nerve of your automation system. Interaction with the brilliant display enables you to control your home's functions, lighting, shading, room climate and energy management. For added security, the Eternity 8 can be smoothly integrated to your SIP door communication system and visualise your installed IP cameras. Thus, combining a maximum ease of use with a reassuring feeling of confidence in control. The Eternity 8 is not just a display. It is the intelligent heart of your home.

With Eternity, modern technology becomes a design statement. The high-resolution, 6-inch TFT colour display with 1440x720 pixels presents all your home's functions at a glance, elegantly framed in premium, real materials. Whether mounted horizontally or vertically, Eternity blends seamlessly into any interior as a refined design feature.

The customisable display offers limitless possibilities, from personal photos and colour schemes to layouts tailored to your preferences. Up to 64 functions can be configured and 12 values can be displayed simultaneously. With compact dimensions of just 92x160x12.5 mm, Eternity combines elegance and functionality to perfection.

Intensity Aluminium  
4 gang push button | INT-AB4.02S

# Intensity

Exquisite finish,  
perfection brought to life

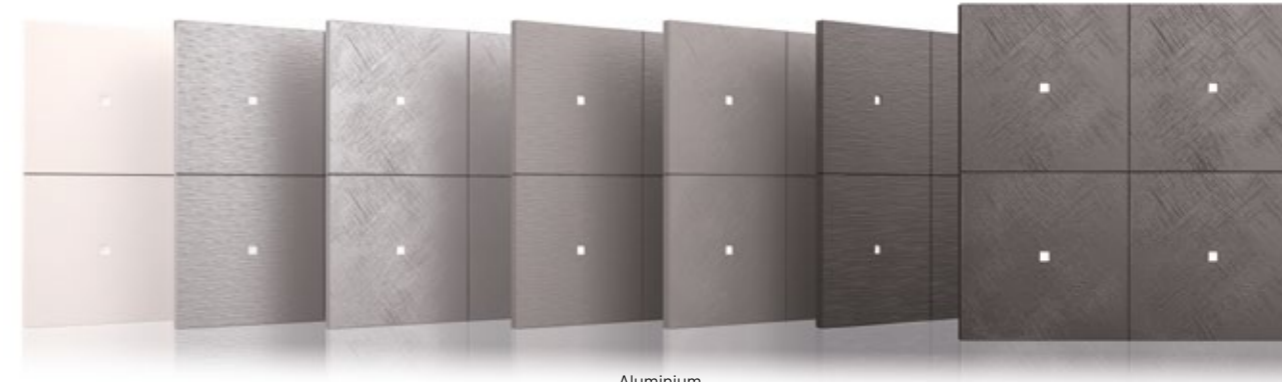

## NEW DESIGN

### Authentic materials. Your style.

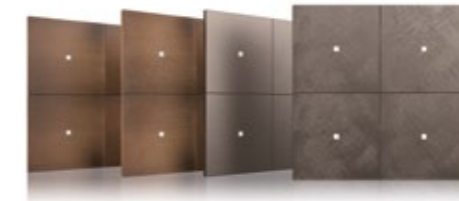

The Intensity series embodies contemporary design at its most refined and blends seamlessly into any interior. Each Intensity push button is a handcrafted unique piece, produced with the utmost care from premium materials to provide a distinctive sense of quality with every touch. Every button is thoughtfully engineered to feature a subtle LED that provides visual feedback when activated. Whether you are controlling lighting, shading, heating or more, Intensity allows you to manage every function of your home with style and intuitive ease.

Outstanding design is not defined by appearance alone. It is revealed in the moment of touch, in the precision of the mechanics, and in the quality of every detail. Guided by this aspiration, we have reimagined our latest generation of push buttons from the ground up, from the materials used to the technological architecture.

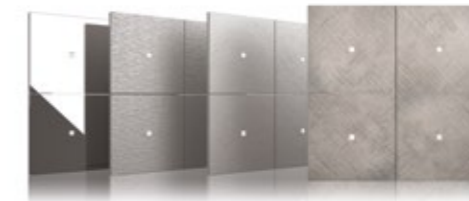

The result is a significant leap in innovation: newly developed hardware that combines exceptional technical performance with an extraordinarily refined tactile experience. Every interaction visibly and tangibly underscores the quality of the materials used. This sets a new standard for smart home control, offering a pared-down design that is uncompromising in its execution and elegant in its effect.

### The signature of nature

The use of stone and wood makes every Intensity switch a distinctive original. No two surfaces are alike, as each tells its own story shaped over time. In our stone push buttons, rare quartz veins break through the dark surface as striking accents, creating genuine focal points. In wood, it is the vibrant and unique grain, formed by the age and growth of the tree, that gives every switch its individual character. Each piece becomes a true fragment of natural history.

### PREVIEW

# Serenity

The essence of control,  
crafted in elegance

### NEW DESIGN

### Serenity

Like Intensity, Serenity stands for premium materials, high design standards, and a clear design language. The difference lies in the details. Instead of touch surfaces, Serenity features mechanical buttons that are deliberately reduced in form and pleasantly precise in operation.

With the latest design update, Serenity has undergone a subtle yet impactful refinement. Indirect lighting beneath the buttons creates a soft, elegant glow, making the buttons appear to float and adding a distinctive sense of depth to the product. The RGBW-capable LED allows the colour of the light to be freely selected, ranging from subtle white tones to individual colour accents.

The update is complemented by extended programming options. Serenity is designed for those who appreciate mechanical buttons and a reduced, atmospheric lighting aesthetic.

**NEW  
DESIGN**

**Velocity**

Velocity impresses with its premium materials, confident design and pleasing sense of linear clarity. Its dynamic execution sets it apart from Intensity. It is operated via slender mechanical pins that give the switch a distinctive architectural character.

As with Intensity, the design update introduces a wide range of new programming options. Each pin is now encircled by an LED ring that accentuates its form with a subtle glow. The RGBW-capable LED allows the colour of the light to be freely selected, ranging from subtle white tones to individual colour accents.

Velocity is designed for those who value exceptional, dynamic design and prefer to interact with precisely engineered mechanical pins.

**Motivity Line**

The Motivity Line combines elegant design with cutting-edge sensor technology. With one of the smallest visible sensor heads on the market, these motion detectors become unobtrusive assistants that blend seamlessly into your interior. Motivity is ideal for transitional areas such as corridors, staircases, wardrobes and bedside areas. The motion detectors respond with precision, ensuring that light is activated exactly when needed. Whether integrated into the wall or discreetly positioned in inconspicuous locations, this solution meets the highest standards of functionality and aesthetics.

**Motivity Ceiling**

Motivity ceiling presence detectors strike the perfect balance between innovative technology and understated elegance. With their minimalist, barely visible sensor head, they blend stylishly and almost invisibly into any ceiling. Thanks to their precise detection range, the sensors are ideally suited to corridors, stairwells and living areas. As soon as movement is detected, the lighting is activated intelligently and only when needed.
